Lab PHP1

Due: 11:59 pm, Monday, November 27, 2017. Submit through Canvas.

Instructions:
- **No late submission** will be accepted.
- Your web site MUST run without error in all major browsers.
- Use PHP1 + Your Last Name + First Letter of Your First Name as your file name. Note that no space or special character other than underscore should be used in the name. For instance, for me, the name of my html file should be PHP1DingW.html. This lab should contain a website with its own directory, in which there is one HTML file. Hence the submission should be a zip with similar naming format, i.e. PHP1DingW.zip. **Violation of naming requirement will result in 3 points cut**.
- In the HTML comment tags, at the very beginning of the HTML, you should put your full name, the course number and name (COP 3834C-01 Web Application Development), the name of lab, e.g. PHP1, and the date. **Without this**, **5 point will be cut**.

Subject

Using WebMatrix or equivalent IDE such as Visual Studio, create a website made of only one HTML file. Not create a pure PHP file without HTML code. In this file, do the following
1) Make an assignment statement that uses at least 3 different PHP arithmetic operators.
2) Make an assignment statement that uses the PHP concatenation operator at least twice.
3) Make an assignment statement that utilizes at least 4 different PHP logical operators.

At the end, print out every expression, i.e. the right hand side of above assignment statements, as a string literal, followed by the value of the expresssion.
